Task 2: Creating Import Table (Staging Table)

Task Information

Epic	Import data
Assigned to	Bharathi P (Team Leader)
Team	Skill Wallet - Nan Mudhalvan
Institution	Anna University BIT Campus, Trichy
Project	Automating Data Import and Relationship Mapping Using Import Sets & Dot Walking

Description

Loaded the employee data file into ServiceNow and created a new Import Set (Staging) table to hold the raw imported data before transformation.

Step-by-Step Process

1. Logged into the ServiceNow instance.
2. Navigated to: All > System Import Sets > Load Data
3. Selected the Create Table option to generate a new staging table.
4. Provided the Import Set table name: import_employee
5. Uploaded the employee data file created in Task 1 (employee data.xlsx / .csv).
6. Confirmed that data was successfully loaded into the staging table.
7. Personalized the list view — added all necessary fields to the form for better visibility.

Objective Achieved

- Successfully created staging table import_employee containing raw employee data.
- Data is ready for Transform Map creation in the next task.
